Executive Summary	Hello! I am a full-stack associate software engineer passionate about building beautiful and interactive interfaces. My favourite thing about software engineering has to be the feeling you get from being able to create or to be part of a team that can create something that can change, transform, and improve the lives of many people for the better.
Core competencies	- Listen and respond constructively to other team members' ideas. - Share ideas and information with others who might find useful. - Speak clearly and can be easily understood - Ability to build, maintain and consolidate partnerships with others(inside and outside) - Try to build relationships with people whose assistance, cooperation, and support may be needed - Openness to different and new ways of doing things
Technical skills	- Work in a team that apply agile methodologies to their project management. - Design beautiful mockups in Figma and implement them to a good detail - Build a full-stack web application in a Javascript stack using frameworks such as React, Vue, Express, Node and PostgreSQL

	• Do software testing and CI/CD using tools such as travis CI, Jest, Mocha&Chai.
Experience	**Andela** *Jan, 2019 – Present* • I worked on Dairynomics 2.0 a platform which provides valuable information to enable Kenyan farmers to make wise decisions. It also provides information about the general livestock advisory, business plans, feed formulation, Business development, health programs and profit projections. I implemented a chore to improve the UI that is built in Vue JS and it was appreciated by the team and my manager. I also worked on some backend stories written in TypeScript/Node Js & Express Js. The product's MVP has yet to be launched. • During the simulation program at Andela, I worked on a product called Authors' haven, its objective was to create a community of like-minded authors to foster inspiration and innovation by leveraging the modern web. We built the product in Node Js & Express Js, PostgreSQL and React Js with Redux for state management. **Limitless Agency LTD.** *Jan, 2018 – Nov, 2018* • I worked on a mobile application 4xchange that tracks the nearest forex bureau with the fairest exchange rates. It was built using React Native. It is currently in beta testing
Education	**Adnventist University of Central Africa** *2012 – 2017* Bachelor of Information management
Languages	**English** – Fluent

	French – Conversational
Mission	Become the solution, the world is expecting me to become
Out Of Office	When I am not coding I am at the gym, out with my friends at local bars, reading an interesting book, my favourite book is The Subtle Art of Not Giving a F*ck or watching a good tv series the best series in my opinion for me is The Wire. I'd love to travel, my dream destinations being Mauritius, Uruguay and Hawaii.
